Decoration Recommendations

Due to the nature of triblend fabric, special care must be taken throughout the decoration process.

SCREEN PRINTING:
Triblend is desirable for its soft hand and luxurious feel. For best results, use the thinnest ink application possible. An underbase may be required when printing on dark colours. To maintain the soft hand, avoid excessive heat during printing and use low-temp/low-cure inks. Minimize flashes between prints—wet-on-wet printing is recommended.

DTG:
Use a low-temperature, low-percentage precure finishing press. The temperature should be maintained below 300°F.

DTF:
Low-temperature transfers are recommended
