Finished measurements in inches. Refer to “How to Measure” guide for detailed information on measurement instructions.

Printing Instructions

Due to the nature of Nylon fabric, special care must be taken throughout the decoration process. Here are some tips to effectively decorate our performance products.

- Garment temperature must not exceed 290°F or 143°C. Exceeding this temperature will cause the fabric to shrink, become wavy or cause dye migration.
- Dryer temperature and belt speeds must be changed accordingly for nylon fabric.
- If flashing these garments, do not exceed 1-2 seconds. Anything longer may damage the fabric as stated above.

EMBROIDERY: Embroidery is reccomended for this garment. An embroidery access zipper is included in the inside liner

SCREEN PRINTING/HEAT TRANSFERS:

- Garment temperature must not exceed 250-290°F or 120-155°C.
- Use fast fushion/low cure temperature ink to help prevent the need for a higher temperature to cure the ink.

A test sample run is recommended, especially if you have a large order or if your printer does not specialize in printing on nylon fabric.
